Introduction

Smart Contact Manager is a digital system used to store and manage contact details such as name, phone number, and email.

This application helps users easily add, update, delete, and search contacts. It replaces traditional contact management methods with a modern and efficient digital system.

Objectives

- To develop a system to store contact information digitally.
- To allow users to add, edit, and delete contacts.
- To provide quick search functionality.
- To manage contacts efficiently in one place.

3. Problem Statement

Managing contacts manually or in simple phone lists can become difficult when the number of contacts increases. It becomes hard to search, edit, or organize contacts effectively. The Smart Contact Manager solves this problem by providing a structured and searchable contact management system.

4.System Requirements

Hardware Requirements:

- Computer or Laptop
- Minimum 4GB RAM

Software Requirements:

- Python
- Flask Framework
- HTML, CSS, JavaScript
- SQLite / MySQL Database
- Web Browser

5.System Architecture

The system consists of three main parts:

- Frontend – User interface built with HTML, CSS, and JavaScript.
- Backend – Application logic implemented using Python Flask.
- Database – Stores contact information such as name, phone number, and email.

6. Modules

- User Login and Registration
- Add Contact
- View Contact List
- Update Contact
- Delete Contact
- Search Contact

7. Database Design

Contacts Table:

- ID – Primary Key
- Name – Contact name
- Phone – Phone number
- Email – Email address

8. Advantages

- Easy contact management
- Quick search functionality
- Organized storage
- Time-saving

9. Applications

- Personal contact management
- Office employee directory
- Customer management system

10. Conclusion

The Smart Contact Manager provides a simple and effective solution for storing and managing contacts digitally. It improves accessibility, organization, and efficiency compared to traditional methods.
